Portfolio Rationalization

Combining proven methodologies with innovative tools, Insight-EA makes the often daunting task of gathering and analyzing your Application and Technology landscapes both simple and fast. Insight-EA uses crowd-sourcing techniques to gather information quickly and efficiently gives you a rich suite of analytics tools that help you to understand and visualize how IT investments align with business strategies. Insight-EA will support efforts to reduce technical debt, minimize functional redundancy, and consolidate processes and locations.

FEATURED HIGHLIGHTS

Crowd Sourcing Surveys - Crowd sourced information delivers rapid and broad based information for your Enterprise and Business Architecture initiatives. It allows for a much broader base of stakeholders to be engaged in a fraction of the time of traditional workshoping and discovery projects. Distribution, responses, and consolidation of information is quick and easy, to support keeping important information evergreen.

Functional Redundancy - Capability Maps outline your organization's Architectural foundation, Insight-EA can create both static and dynamic Heat Maps based on either simple counts or complex criteria. Heat Maps show redundancy measured against a variety of dimensions (Applications, Business Processes, Org Units, etc.), while Dynamic Heat Maps show strategic alignment of a dimension across all Capabilities.

Technology Roadmaps - Insight-EA can build dynamic road maps to show you your entire technology landscape from a variety of view points. We can easily show you all of the ageing technologies in a particular category, along with the Capabilities, Processes, and a variety of other dimensions that are potentially at risk because of those ageing or unsupported technologies.

Application Value - Application Value Charts allow you to plot the Business Value and Technical Health of a number of Applications relative to each other based on Crowd Sourced and other data. When used along with the Functional Redundancy and Strategic Fit techniques these tools provide quick and powerful insights into your portfolio.

BENEFITS

- Understand your applications quickly through integrated surveying capabilities.
- Quickly identify consolidation opportunities and identify the impact of eliminating applications.
- Visualize current and future application portfolios against strategic application criteria and objectives.
- Prioritize Application Rationalization activities based on business value, technical health, strategic alignment and ongoing projects and application and supporting technology lifecycles.
